## How to report a swarm

The purpose of [www.swarmpatrol.com](http://www.swarmpatrol.com) is to provide a place for the public to record the detailed location of a bee swarm, then have it promptly collected by the nearest registered swarm collector.

## The system

- captures the swarm's GPS coordinates
- finds the closest 3 beekeeping swarm collectors prepared to travel the distance (3 in case unavailable)
- sends them a text message about the swarm

## The swarm collector

- contacts the swarm reporter
- arranges to remove the swarm
- after removal records the swarm as collected
